B. Tech.

(SEM. V) (ODD SEM.) THEORY EXAMINATION, 2014-15 COMPUTER GRAPHICS

Time : 2 Hours]

[Total Marks : 50

- 1 Attempt any two parts of the following : (2×6=12)
 - (a) Differentiate between Random and Raster scan system with example.
 - (b) Write DDA algorithm for line drawing. Rasterized the line between the points (20, 10) and (30, 18) by using the same.
 - (c) Explain the working of colour CRT by using delta shadow mask method.

- 2 Attempt any two parts of the following : (2×7=14)
 - (a) Write Liange Barsky algorithm for Line Clipping. Use Liange Barsky line clipping algorithm to clip the line P1(-15,-30) to P2(30,60) against the window having diagonally opposite corners as (0,0) and (15,15).

- (b) Explain concave and convex polygons with proper example. Discuss Sutherland-Hodgeman polygon clipping algorithm by all possible cases.
- (c) Rotate a triangle at A (0,0), B(1,1), C(5,2) by 45° about :
- (i) Origin (0,0)
 - (ii) Point P(-1,-1). Find new coordinates of the rotated figure.

3 Attempt any two parts of the following : (2×6=12)

- (a) Find the coordinates of a pyramid whose coordinates are A(0,0,0), B(1,0,0), C(0,1,0) and D(0,0,1) after mirror reflection with respect to the plane passing through the origin and having the normal vector $N = i+j+k$.
- (b) What is Projection ? Derive oblique parallel projection and perspective projection matrices.
- (c) Derive a general form of 3D rotation about :
- (i) X-axis
 - (ii) Z-axis

4 Attempt any two parts of the following : (2×6=12)

- (a) What is the importance of hidden line and surface removal algorithm ? Discuss the mechanism of Z-buffer surface removal algorithm and differentiate it with A-buffer surface removal algorithm.
- (b) Specify the significance of continuity conditions. Discuss parametric continuity conditions and differentiate it with geometric continuity conditions.
- (c) Explain diffuse reflection and Gouraud model.
